Day 06 Assignment

Routing and memory-node integration

Foundations (Days 1-7)

Day goal

- Connect the deterministic router to memory nodes and verify request placement.

Per-member assignments and expected outputs

Member 1 - Team Lead; backend app/main.py and integration

- Assignment: Wire backend dependencies for route-to-node selection without changing API contracts.
- Expected output: Backend can access a configured grid.

Member 2 - Memory grid and app/services

- Assignment: Verify GridRouter selection is stable and nodes expose a usable lookup interface.
- Expected output: Router/node integration cases pass.

Member 3 - PDF processing

- Assignment: Check PDF-derived text can be normalized and passed to grid-facing services.
- Expected output: PDF-to-grid handoff documented and exercised.

Member 4 - worker/ and tests/

- Assignment: Add integration tests for route selection and memory lookup.
- Expected output: Routing and lookup integration tests.

Member 5 - frontend/

- Assignment: Review the prompt submission contract against backend response fields.
- Expected output: Frontend and backend prompt contract confirmed.

GitHub push and review

- Create a feature branch: git checkout -b member<N>-day6
- Stage only your completed files: git add <files>
- Commit: git commit -m "day6: <describe your change>"
- Push the branch: git push origin <branch>
- Open a PR with a summary and test results.
- Member 1 reviews each PR, resolves conflicts, and merges only after checks pass.
- Confirm main remains green; tag the completed day when the team agrees.

End-of-day checklist

- [ ] All five members posted a done/blocked status for day 6.
- [ ] Each expected output is present or has an explicit blocker and owner.
- [ ] Relevant tests and local smoke checks pass.
- [ ] Changes are pushed, reviewed, and merged through PRs; main is green.
- [ ] Record the day summary and remaining follow-up work.
