Day 09 Assignment

Memory services and TTL

Implementation (Days 8-14)

Day goal

- Make memory service behavior predictable under expiration and repeated requests.

Per-member assignments and expected outputs

Member 1 - Team Lead; backend app/main.py and integration

- Assignment: Integrate memory service calls into backend request handling.
- Expected output: API request path uses the service layer.

Member 2 - Memory grid and app/services

- Assignment: Enforce TTL on memory entries and remove stale values on lookup.
- Expected output: Expired entries are not served.

Member 3 - PDF processing

- Assignment: Harden PDF text normalization and extraction failure reporting.
- Expected output: Normalized extraction output and explicit errors.

Member 4 - worker/ and tests/

- Assignment: Add TTL expiration and service-level regression tests.
- Expected output: TTL/service tests pass.

Member 5 - frontend/

- Assignment: Show clear UI states for cache retrieval and expired/missing results.
- Expected output: Frontend handles cache miss and expiration outcomes.

GitHub push and review

- Create a feature branch: git checkout -b member<N>-day9
- Stage only your completed files: git add <files>
- Commit: git commit -m "day9: <describe your change>"
- Push the branch: git push origin <branch>
- Open a PR with a summary and test results.
- Member 1 reviews each PR, resolves conflicts, and merges only after checks pass.
- Confirm main remains green; tag the completed day when the team agrees.

End-of-day checklist

- [ ] All five members posted a done/blocked status for day 9.
- [ ] Each expected output is present or has an explicit blocker and owner.
- [ ] Relevant tests and local smoke checks pass.
- [ ] Changes are pushed, reviewed, and merged through PRs; main is green.
- [ ] Record the day summary and remaining follow-up work.
